

Waste Management - UK - June 2016

Report Price: £1495.00 | \$2421.08 | €1899.11

The above prices are correct at the time of publication, but are subject to change due to currency fluctuations.

“Investment in new waste treatment infrastructure is expected to slow over the next few years as the requirements for municipal residual processing infrastructure are close to being met. According to Eunomia’s eighth Residual Waste Infrastructure Review, published in June 2015, the UK is just three years away from eliminating the residual waste treatment gap.”
 – Claudia Preedy, B2B Analyst

This report looks at the following areas:

- Following the referendum vote to leave the EU in June 2016, is the UK still expected to implement elements of the EU Circular Economy package in a future waste policy?
- Is investment in the UK waste treatment infrastructure set to slow over the next few years?
- Has the “landfill tax escalator” encouraged increased investment in alternative treatment facilities?
- What have been the recent trends in M&A activity in the waste management sector?
- Are households with less frequent residual bin collections likely to recycle more?

Executive Summary

Market size

Figure 1: Waste Arisings in the UK, by Source, 2011-15, (% of Total)

Market trends

Figure 2: Household Waste in England, by Collection Method, 2010/11 and 2014/15, (000 Tonnes)

Figure 3: Landfill Capacity in England and Wales, 2010-14, (Million Cubic Metres)

Figure 4: Regional Recycling Rates, England, 2014/15, (%)

Market factors

Uncertainties whether UK will adopt EU Circular Economy Package following Brexit vote

Investment in new waste treatment infrastructure is expected to slow

Local authorities in England need to step up efforts to achieve EU 50% recycling target by 2020

Companies

Forecast

Figure 5: UK Waste Arisings Forecast, 2016-20, (Million Tonnes)

What we think

Key insights

Following the referendum vote to leave the EU in June 2016, is the UK still expected to implement elements of the EU Circular Economy package in a future waste policy?

Is investment in the UK waste treatment infrastructure set to slow over the next few years?

Has the "landfill tax escalator" encouraged increased investment in alternative treatment facilities?

What have been the recent trends in M&A activity in the waste management sector?

Are households with less frequent residual bin collections likely to recycle more?

The Consumer Household Waste Collection Frequency

Key points

Fortnightly collections of residual household waste are the most widespread

Figure 79: Frequency of kerbside nonrecyclable household waste collection, April 2016, (% of respondents)

Figure 80: Provision of food waste collection service, April 2016, (% of respondents)

Just over half of households are provided with separate food waste collection service

The Consumer Waste Collection Attitudes

Key points

Three-quarters of respondents are satisfied with the reliability of household waste collections

Figure 81: Satisfaction with household waste collection service, April 2016, (% of respondents)

Figure 82: Satisfaction with size of bin for non-recyclable waste, by collection frequency, April 2016, (% of respondents)

Figure 83: Satisfaction with the frequency of collection of non-recyclable waste bin, by collection frequency, April 2016, (% of respondents)

Figure 84: Attitudes towards household waste and collection, April 2016, (% of respondents)

Fewer people with fortnightly bin collections put recyclable rubbish or food waste in the non-recyclable bin than people with weekly collections

Figure 85: I sometimes put recyclable rubbish in my non recyclable bin, by collection frequency, April 2016, (% of respondents)

Figure 86: I sometimes put food waste in my non recyclable bin, by collection frequency, April 2016, (% of respondents)

The majority of people (63%) do not believe that separating food waste is too much hassle

Figure 87: My household could cope with less frequent nonrecyclable waste bin collections, by collection frequency, April 2016, (% of respondents)

The Consumer Waste Reduction Attitudes

Key points

Figure 88: Attitudes towards the effectiveness of waste reduction incentives, April 2016, (% of respondents)

Figure 89: Attitudes towards the effectiveness of other waste reduction measures, April 2016, (% of respondents)

Facing fines identified as most effective measure to reduce waste in non-recyclable bin

Industry Structure

Key points

Industry Development

Industry focus on waste treatment infrastructure

Merger & Acquisition activity
