

Cookies and Crackers - Brazil - January 2013

Report Price: £2467 | \$3995 | €3108

The above prices are correct at the time of publication, but are subject to change due to currency fluctuations.

"The cookies category has high penetration among Brazilian consumers, with 85% of Brazilians say they eat cookies or crackers. Some consumer groups are having more specific strategies targeted at them in order to increase their consumption frequency and product diversification."

— Jean Manuel Alves da Silva, Senior Food Analyst

In this report we answer the key questions:

- How can the cookies and crackers category increase in value?
- Are there any Socio-economic segmentation strategies to be taken?
- What are the implications of "health" and "wellbeing" criteria for the category?
- What can the category do to attract more female consumers, who are more open to indulgence?
- Given the consumption frequency by older consumers (aged 45+), what are the best strategies to encourage product diversification in this group?
- What are the best strategies to target consumption by children, given the potential limitations this group presents?

The cookies category has high penetration among Brazilian consumers. According to the consumer research, 85% of Brazilians say they eat cookies or crackers.

There is a slight difference in consumption between the Socio-economic groups; classes C1 and C2 have a slightly higher consumption frequency and interest in various subcategories. Those in the AB group buy into more sophisticated subcategories, such as wafer cookies, but also less expensive subcategories such as Maria cookies and cream crackers.

Some consumer groups are having more specific strategies targeted at them in order to increase their consumption frequency and product diversification. Women are especially open to the cookies category and can enjoy products that are more in line with their lifestyle and preferences. More mature consumers (aged 45+), who have a relatively high consumption frequency, may be encouraged to diversify their consumption habits by being able to choose from different healthy products. For children, whose consumption normally depends on their parents' choice, nutritious products with discreet advertising are the most advised ones.

The category's price increase over the last five years reached 37%. Production costs, together with an increase in product quality, had some impact on the category's inflation rates. Therefore, companies must have strong innovations in quality and brand positioning; on the other hand, innovations with 'healthy' product attributes must be less complex, focused on basic criteria, such as whole-grain and natural ingredients.

Report Price: £2467 | \$3995 | €3108

The above prices are correct at the time of publication, but are subject to change due to currency fluctuations.

Women Have Higher Usage of Cookies and Crackers, but Products Need to be Compatible with Their Lifestyle

Key points

Women consume more than men, especially crackers

Figure 42: Frequency of eating cookies and crackers, by gender, June 2012

Figure 43: Eating cookies and crackers, candy and chewing gum, "every day," by gender, June 2012

Consumption by 35+ women is important, but conservative

Figure 44: Frequency of eating cookies and crackers, by woman's age, June 2012

Figure 45: Types of cookies and crackers bought, by woman's age, June 2012

Figure 46: Types of cookies bought, by woman's age, June 2012

In terms of healthy consumption women prefer whole-grain products to low-calorie ones

Figure 47: Attitudes toward eating habits, by gender, June 2012

Figure 48: Attitudes toward cookies and crackers, by female consumers, June 2012

Packaging solutions can increase consumption among women

Figure 49: Location where cookies and crackers are typically bought, June 2012

What it means

Older Consumers Show High Consumption Frequency but Their Preferences are Limited

Key points

Older consumers show high consumption frequency

Figure 50: Weekly consumption of cookies and crackers, candies and chewing gum, at least once a week, by age, June 2012

Figure 51: Frequency of eating cookies and crackers, by selected frequencies, by age, June 2012

Figure 52: Average price of selected categories, 2010

Crackers are the most consumed products and healthy options can generate diversification

Figure 53: Frequency of eating cookies and crackers, "at least once a week," by age, June 2012

Figure 54: Types of crackers bought, by age, June 2012

Figure 55: Types of crackers bought, by age, June 2012

Figure 56: Attitudes toward cookies and crackers, by age group, June 2012

Cookies are well-accepted, but in a few varieties

Figure 57: Types of cookies bought, by age, June 2012

Figure 58: Types of cookies bought, oat cookies, by age, June 2012

Figure 59: Agreement with the statement "I prefer buying healthy cookies and crackers if available," by age, June 2012

Innovations in flavor can generate search for variety

Figure 60: Attitudes toward cookies and crackers and candy, "I like trying new flavors," by age, June 2012

Figure 61: Attitudes toward cookies and crackers, by demographics, June 2012

What it means

More Nutrition and Less Indulgence for Children

Key points

Obesity increase and regulations tend to restrict consumption by children

Figure 62: Obesity among young Brazilians, 1975, 1989 and 2009
