

CCTV (Industrial Report) - UK - November 2014

Report Price: £995.00 | \$1611.35 | €1263.96

The above prices are correct at the time of publication, but are subject to change due to currency fluctuations.

"The prospects for the UK CCTV industry appear strong, with construction in the commercial sector anticipated to climb steadily and the private sector widely upgrading systems. As a result, the market is expected to deliver real terms growth again in 2015."

– Ben Harris, Industrial Analyst

This report looks at the following areas:

- How will the latest guidance covering the use of CCTV affect manufacturers' new product development?
- What can manufacturers do to accelerate the adoption of IP cameras among existing analogue camera users?
- Which emerging demand sectors have most impacted the market in 2014?
- What new technologies and products are expected to have the greatest effect on the market in the coming five years?

Closed circuit television is a surveillance technique that uses cameras to capture and transmit visual information over a closed circuit through electrically conducting cable or wireless transmitter and receiver.

Since its introduction, CCTV has evolved from cameras and recorders that were connected to each other to monitor a limited area, to systems that are no longer closed in their operation. CCTV is therefore increasingly being replaced by the term 'video surveillance'.

CCTV and video surveillance systems can now cover larger areas, operate through remote monitoring and recording and be integrated with other security equipment applications.
