

Computer Security - UK - November 2015

Report Price: £995.00 | \$1611.35 | €1263.96

The above prices are correct at the time of publication, but are subject to change due to currency fluctuations.

"The potential costs of data breaches are extreme. At a national security level they can literally be a matter of life and death, while in the other public, enterprise and SME sectors data breaches can lead to the disclosure of very personal and important individual financial information. For this reason, data breaches attract mass public attention and consumer outrage."

– Terry Leggett Senior B2B Analyst

This report looks at the following areas:

- How will the computer security market develop over the next five years?
- How are our changing communication habits affecting the industry?
- Which technologies and approaches to computer security will gain in importance?
- Will growth in the market be driven by the government and public sector, large enterprises, or SMEs and consumers?
- How is the cloud and growth in e-commerce affecting the market?

The stakes of cyber crime can be extremely high. Cyber security is becoming increasingly sophisticated, but so are cyber criminals, and no government, company or individual that has connected devices can afford to become complacent. Under such conditions, the market for computer security is set to continue to expand. With the maturity of the sector, solutions are also increasingly moving to value added services at one end and commoditised products at the other.
