

Tubes and Pipes - UK - December 2015

Report Price: £995.00 | \$1611.35 | €1263.96

The above prices are correct at the time of publication, but are subject to change due to currency fluctuations.

"Continued investment by the utility sectors, albeit now at lower levels than in the post-privatisation period, combined with stronger demand from the manufacturing sector and particularly the highly cyclical construction sector, are contributing to growing demand for tubes and pipes."

– Terry Leggett, Senior Analyst

This report looks at the following areas:

- How will the market develop over the next five years?
- What will be the key market drivers?
- How are different materials being affected by end-use markets and other factors?
- Which product sectors now hold the best prospects?
- Which products will benefit most from end-use market trends?

Continued investment by the utility sectors, albeit now at lower levels than in the post-privatisation period, combined with stronger demand from the manufacturing sector and particularly the highly cyclical construction sector, are contributing to growing demand for tubes and pipes. The construction sector, as always, is exaggerating GDP development, and for this reason prospects for the tubes and pipes sector are strong.
