

Saving and Investing for Children - UK - April 2015

Report Price: £1750.00 | \$2834.04 | €2223.04

The above prices are correct at the time of publication, but are subject to change due to currency fluctuations.

“Ownership levels have remained considerably above those for Junior ISAs. However, as of April 2015 CTF owners have the option to switch their accounts to JISAs. As the JISA market is far more competitive than the now-stagnant CTF market, this is a significant opportunity for providers and consumers, yet awareness of and interest in JISAs remains low.”
 – Jessica Morley, Financial Services Analyst

This report looks at the following areas:

- The market for a 'university savings account'
- Saving for children is about more than the accumulation of value
- The Child Trust Fund to Junior ISA Transition

After a prolonged period of squeeze, family finances are finally beginning to improve. Low inflation and rising wages are helping incomes go further and boosting financial confidence. However, these improvements are not necessarily benefitting the children's savings market. Affordability is still an issue for many. Increases in confidence often lessen the perceived need to save and the continuing low interest is off-putting to savers. Furthermore, the challenges in achieving the very high savings targets set by parents and others saving for reasons that are associated with high costs, such as university, are such that children's savers are wont to become demoralised and disengaged from the savings market altogether.

This lack of commitment to saving can be damaging to those wishing to save on behalf of their children as the rising costs of raising a child to the age of 18, and realistically considerably beyond, mean that starting to save earlier has never been more important. Yet, children's savers do little to help themselves. There is significant disparity between sentiment and proactive action. Whilst many parents consider it important to encourage their children to manage their money, this sentiment does not always translate into proactive action.

Much of this can be attributed to a lack of know-how. Whilst financial education is now on the national school curriculum, parents did not receive this education when they were younger and, consequently, many lack the financial nous to take practical financial planning steps. This presents children's savings providers with an opportunity to play a larger role in their customers' lives. Through the design of new savings products which are linked to specific saving targets, for example, providers can help parents and other children's savers achieve their goals. Capitalising on this opportunity will ensure providers build more long-lasting and trusting relationships with both consumers, something that will benefit both parties.

This report examines these, and other, issues and developments in the children's saving and investment market and considers their implications for providers. In addition, Mintel's exclusively commissioned consumer research explores parental attitudes and behaviours, providing insight into savings motivation, intentions and actions.

Table of Contents

Introduction

Abbreviations

Executive Summary

The market

Market expected to grow as number of children increases

The economic environment is slowly improving for families

Regulation change and Budget announcements have big implications for the children's savings market

Key players

Children's savings products low priority for provider advertising spend

Encouraging engagement through financial education is key to company strategy

The consumer

Growing proportion of parents say nobody saves on behalf of their child

Figure 1: Saving on behalf of children, February 2015

JISA ownership has increased but remains subdued

Figure 2: Ownership of children's savings products, February 2015

Majority of parents' motivations for their children's savings are non-specific, but university costs account for a large proportion

Figure 3: Reasons for saving for children, February 2015

Limited application of tax to children's savings accounts dampens interest in tax-free products

Figure 4: Consumers' understanding of how tax is applied to children's savings, February 2015

The savings habits of parents

Figure 5: Attitudes towards savings habits, February 2015

Desire to save on children's behalf is not always strong enough to motivate parents to take a stricter approach to budgeting

Figure 6: Parent attitudes towards savings budgets, February 2015

A fifth of parents would be interested in purpose-specific children's savings products

Figure 7: Parent attitudes towards reasons for saving for children and relevant products, February 2015

Issues and Insights

The market for a 'university savings account'

The facts

The implications

Saving for children is about more than the accumulation of value

Saving and Investing for Children - UK - April 2015

Report Price: £1750.00 | \$2834.04 | €2223.04

The above prices are correct at the time of publication, but are subject to change due to currency fluctuations.

- Projected 6% increase in under-15s population in next five years
- Family finances begin to improve, but concern about the future remains elevated
- Switching to JISAs possible for CTF owners from April
- JISA subscription limit increased but interest in product undermined by lack of necessity for tax-free children's savings products

Market Size and Growth Potential

- Market size for children's savings products
 - Figure 8: Estimated number of children's savings accounts, by type, 2014
- Market growth potential
- A number of caveats to keep in mind

The Economic Environment for Families

- Family finances finally begin to improve
 - Figure 9: Consumers' assessment of their current financial situation (in terms of how this compares to 12 months ago) and how confident they are for the next 12 months, by presence of children, February 2015

The Regulatory Environment

- Child Trust Fund owners allowed to switch to Junior ISAs
- Budget 2015: Boosts to Savers
- Junior ISAs
 - Figure 10: Junior ISA subscription limits, 2011-15
- Help-to-Buy ISA
- Personal Savings Allowance

Key Players – What You Need to Know

- Children's savings accounts dominate the market
- Junior ISAs are far behind
- Adspend for children's savings products continued to fall in 2014
- The role of education in competing for new business

Product Range

- Children's Savings Accounts
- Child Trust Funds
- Junior ISAs
 - Figure 11: Number of Junior ISAs, amounts subscribed and average subscription, 2011/12-2013/14
- Bonds

Advertising Spend

- Children's savings products low priority for advertising expenditure
 - Figure 12: Total advertising expenditure on children's savings and investment products (including junior ISAs), 2011/12-2014/15
- Press is the main media type used
- Negligible adspend on Junior ISAs
 - Figure 13: Total advertising expenditure on junior ISA products, 2010/11-2014/15
