

Waste Management - UK - June 2015

Report Price: £995.00 | \$1611.35 | €1263.96

The above prices are correct at the time of publication, but are subject to change due to currency fluctuations.

"Generally, most people now understand that resources are becoming scarcer and that it is down to both individuals and companies to make the most of them and to also reduce the amount of waste they initially generate."

– Lewis Cone, B2B Analyst

This report looks at the following areas:

- What are the key determinants driving the waste management industry?
- Has the industry recovered alongside the economy after the financial crisis? If so, how has it developed and changed since the recession?
- How have government schemes influenced market demand and supply?
- How have regulations and the threat of climate change changed the industry's approach?
- What are the key issues that the industry needs to address to diversify its service and compete in the long term?
- What does the future hold for UK waste management?

Waste management in the UK has changed significantly over the last decade, particularly in the last six years as the EU implemented several directives, regarding landfill, recycling and reuse, for member states to abide by. The UK has reduced the amount of waste deposited at landfill sites and has been fairly active in recycling, composting and anaerobic digestion. Progress has also been made towards improving recycle quality and moving from 'down-cycling' to closed-loop recycling. However, English recycling rates have stagnated over the last two years, while those in Scotland, Wales and Northern Ireland have continued to improve. With the economy expected to experience stable GDP growth over the next four years, the UK faces a tough challenge in reducing overall waste arisings and improving disposal, treatment and collection efficiencies. The European Commission's new waste directives, expected to be announced later this year, will drive any future UK policy action.

DID YOU KNOW?

This report is part of a series of reports, produced to provide you with a more holistic view of this market

Waste Management - UK - June 2015

Report Price: £995.00 | \$1611.35 | €1263.96

The above prices are correct at the time of publication, but are subject to change due to currency fluctuations.

Table of Contents

Executive Summary

Market size

Figure 1: Waste Arisings in the UK, by Source, 2010-2014, (% of Total)

Market trends

Figure 2: Household Waste in England, by Collection Method, 2009/10 and 2013/14, (000 Tonnes)

Figure 3: Landfill Capacity in England and Wales, 2009-2013, (Million Cubic Metres)

Figure 4: Regional Recycling Rates, England, 2013/14, (%)

Market factors

The current lack of a national or EU-driven waste framework has caused uncertainty about the direction waste management should undertake

The use of new technology and increasing innovation in the industry has reduced the threat of environmental damage and helped improve the efficiency of waste recovery

The economic recovery has led to new challenges in reducing waste arisings

Waste treatment facilities are under threat from overcapacity, but exporting scrap material is helping negate this problem

Companies

Forecast

Figure 5: UK Waste Arisings Forecast, 2015-2019, (Million Tonnes)

UK household waste is expected to fall at a stable rate to 2019

Figure 6: UK Household Waste Arisings Forecast, 2015-2019, (Million Tonnes)

What we think

Key Insights

Has the 'circular economy' changed waste management behaviour?

What innovations are we seeing in the market?

What has been the impact of the removal of previous EU regulations?

How have the largest companies adapted to the upturn in economic activity while still pursuing a 'circular economy'?

What impact will the government have on market development over the coming years?

What challenges will the industry face in the future? Could they lead to market opportunities?
