“Despite consumers’ interest in eating healthier, they also want food that tastes good. While government, food manufacturers and restaurants try to provide healthier options to Americans, these organizations are up against several challenges, especially regarding how to market low/no/reduced sodium items.”

– Emily Krol, Health and Wellness Analyst

In this report we answer the key questions:

- Consumers believe they should be responsible for choosing food and drink, but many recent rulings have impacted availability of certain products. What is the impact of government regulation on consumer choices?
- Consumers want food that tastes good, but know that high-sodium contents are unhealthy. How can restaurants and packaged foods companies reduce sodium content without alienating people who want great-tasting food?
- The jury is still out regarding how bad sodium really is, especially for those who do not suffer from hypertension or high blood pressure. How will this affect consumer perceptions of low-sodium products?

According to the Centers for Disease Control and Prevention (CDC) about 90% of Americans over the age of two consume too much sodium, which increases the risk for high blood pressure. High blood pressure increases the risk for heart disease and stroke.

Therefore, limiting sodium in one’s diet is becoming increasingly important, not only to stay healthy and disease free, but also to avoid unnecessary weight gain.

Most sodium consumption comes from processed foods and restaurant fare. Manufacturers and restaurant owners have an opportunity to create lower-sodium products that will be healthier for customers. Additionally, there is opportunity for alternatives to traditional table salt in cooking.

The purpose of this report is to look at how demographic shifts affect demand for reduced-sodium products. The report will also explore how and why consumers limit sodium in their diet, and offer solutions based on these reasons. Consumer opinions regarding who should be responsible for imposing sodium restrictions are also included.

Marketing low/no/reduced-sodium products presents a challenge to marketers in that sometimes consumers are turned off by such claims due to a taste consideration. Therefore, current marketing strategies are explored and recommendations offered for how to continue to market these products.

Sodium Limiters

Key points

Six out of 10 watching sodium levels
  Figure 30: Reasons for limiting sodium, by gender, November 2012

Both men and women watch sodium levels, but for slightly different reasons
  Figure 30: Reasons for limiting sodium, by gender, November 2012

Watching sodium intake increases with age
  Figure 31: Reasons for limiting sodium, by age, November 2012

Lowest household income most likely to watch sodium levels
  Figure 32: Reasons for limiting sodium, by household income, November 2012

Presence of children
  Figure 33: Reasons for limiting sodium, by presence of children in household, November 2012

Sodium Limiting Behaviors

Key points

Putting away the salt shaker

Female sodium limiters read labels
  Figure 34: Ways to limit sodium, by gender, November 2012

Educate older men about sodium consumption
  Figure 35: Ways to limit sodium, by gender and age, November 2012

More affluent consumers likely able to afford healthier food products
  Figure 36: Ways to limit sodium, by household income, November 2012

Presence of children

Interest in Sodium-Limiting Products

Key points
- Sodium limiters using a variety of herbs and spices to limit sodium
  Figure 42: Products to limit sodium intake, November 2012
- Women more likely to use salt alternatives
  Figure 43: Product used to limit sodium intake, by gender, November 2012
- Older male sodium limiters not using as many products to limit
  Figure 44: Product used to limit sodium intake, by gender and age, November 2012
  Figure 45: Product not used, but would be interested in trying to limit sodium intake, by gender and age, November 2012
- Higher household incomes more likely to use seasonings, herbs, and spices
  Figure 46: Product used to limit sodium intake, by household income, November 2012
  Figure 47: Product not used, but would be interested in trying to limit sodium intake, by household income, November 2012
- Those who use salt alternatives also use a variety of products
  Figure 48: Product used to limit sodium intake, by ways to limit sodium, November 2012

Attitudes Toward Sodium/Health

Key points
- Respondents prefer to control amount of sodium in their food
- Older women most likely to prefer to cook at home to control sodium
  Figure 49: Attitudes toward sodium, by gender and age, November 2012
- Educate lower household incomes who are concerned about sodium intake
  Figure 50: Attitudes toward sodium, by household income, November 2012
- Brands have an opportunity to educate consumers who are confused
  Figure 51: Attitudes toward sodium, by sodium restriction responsibility, November 2012
- Nonsodium limiters not concerned with amount of sodium in their diet
  Figure 52: Attitudes toward sodium, by sodium limiters, November 2012

Relationship Between Sodium and Dieting

Key points
- Older respondents most likely to watch diet for salt intake
  Figure 53: Salinity monitor spoon
  Figure 54: Reasons for dieting, by age, April 2011-June 2012
- Food products purchased when dieting
  Figure 55: Diet food products, by age, April 2011-June 2012
Attitudes Toward Sodium - US - February 2013

Report Price: £2466.89 | $3995.00 | €3133.71
